## Recliner

Designed to maximize maneuverability with a minimal footprint, Ava's features include pivoting arms, easy-to-use controls, and reverse recline. This departure from the typical aesthetic was inspired by extensive research and offers a more inviting seating option that is both comfortable and comforting.

Infinite back adjustments, a reverse recline, and independent footrest controls accommodate a multitude of comfortable positions.

## Details

Dual-arm controls maximize accessibility from any position or posture.

Improved kinematics provide a back pivot location that mimics the movements of the body.

Enclosed casters and an open design between the arms, back, and seat prevent debris from getting trapped, allowing easy and efficient cleaning.

**Designed by 5d Studio**

Designers David Ritch and Mark Saffell of 5d Studio were drawn to the idea of enhancing performance while eliminating excess. The result is an award-winning recliner that thoughtfully combines scale, function, comfort, and ease of use.

Clearance is designed to accommodate tables and equipment between underside and floor.

Curved back profile, extended rear casters, and a standard push bar create an ease of mobility.

Pivoting arms give caregivers better access and leverage.

The Wingback design, with optional pillow, features a cradled headrest for enhanced comfort and support.

Red and green visual cues with central brake and steer pedals on each side of the recliner offer optimal visibility.
